

Remote Data Reading Limited

DISPLAY 3 PLAY PRODUCT DETAILS

This device is a multi-utility unit designed for domestic users, or for hotels, caterers and similar businesses. It has been developed for conservation/sustainability purposes to save power or water and reduce bills. It offers the possibility to detect abnormal consumption/leakage very quickly.

It is an EN13757-4 mode T1 radio receiver with data logging memory and a USB interface but with the advantage of an LCD screen for displaying data collected in a user-friendly form.

The receiver is automatically switched on 3 times each day and receives radio transmissions from its pre-programmed meter list. The respective meter counts can be displayed on its LCD screen and it has the capability to display weekly, monthly or annual meter consumption data for the last 4 years.

The accompanying software and built-in USB interface provide the ability to display consumption data in graphical or tabular form.

The unit is very easy to use and requires virtually no maintenance except for replacing the standard AA/LR6 batteries.

Connectivity	<ul style="list-style-type: none"> - GPRS quad band modem with internal aerial - USB I.1 configuration interface - 868Mhz or, on request, 434Mhz
Software	<ul style="list-style-type: none"> - USB driver and configuration and data reading software included (multi-lingual) - Free software library for reading radio transmissions
IP protection	Conforms to IP43
