

Remote Data Reading Limited

HANDHELD PDA PRODUCT DETAILS

This hand held PDA computer provides the ability to remotely read meters fitted with radio transmitters. Alternatively, the device can be used for data storage where meters are read manually and the reading is input.,

The device is extremely simple to use. It operates with just a USB connection and the installed software provides an 'ActivSync' facility to automatically load and download data.

The software can be configured for automatic or manually meter reading and for specific databases.

The capability to use a memory stick offers greater flexibility over the storage, transfer and backup of data.

It is compatible with a wide range of technologies including GPRS.

Connectivity	Full USB interface 1.1
