

# Remote Data Reading Limited

## WEB HOSTING PRODUCT DETAILS

Our web hosting solutions provide the opportunity to you, and, potentially your final customer or subscriber, to see and analyse individual consumption patterns via a simple and easily-accessible system.

It is not necessary to install any software on your computer.

The data can be accessed through a standard internet connection at any time or location and by any authorised user.

The system is user-friendly and elements can be customised. It also offers the capability to view the data in differing formats and to download the data into your chosen applications.

Server	Various servers in Europe.
Volume of data	At least 2 years of data is stored, depending on reading intervals and meter volumes.
Data security	Our servers use the latest security and data encryption features. Access is controlled by log on and password identification. Data is identified by meter number is, therefore, not personalised so there are no data protection issues. Data back-up options are available.
Data transfer	Methods of data transfer are via: <ul style="list-style-type: none"> <li>• SIM enabled GPRS unit</li> <li>• PDA upload</li> </ul> Data collection is remote. Data transfer is fully flexible and can be loaded at the frequency and timing specified by the customer. The data can be downloaded into other applications such as spreadsheets or databases for further analysis and manipulation or can be integrated with a customer's other software .
Multi utility	Web hosting embraces all utilities - electricity, gas and water.
Multi access	Data access is web-based so there is no limit to the number of users who can view the data online. As an option, access can be arranged for your customer to view their individual data.
Presentation and design flexibility	Data is delivered in a spreadsheet form for end-user manipulation. Usage can be presented in various formats, data arrays or graphical and displayed by volume or value. 'Home' pages can be customised.

**Associated RDR Products:**

- GPRS transmitters, including SIM enabled
- MTB USB receiver
- Hand held PDA
